

QUT ePrints - Guide to exporting records in BibTeX format

Step 1

Go to Advanced Search and enter search criteria (eg author name, item type, date ranges).

When the results of the search are displayed on the screen, you will see an option to 'Export' the results. Change the export format from ASCII Citation to BibTeX (see below) before saving the file.

You can change the file name but do not change the .bib file extension as this is a particular type of text file which can be imported into an ORCID record (or opened in BibTeX).

Importing records into an ORCID record

Login to your ORCID record. Go to the 'Works' section and, from the '+Add works' menu, select 'Import BibTeX'.

Use the 'Choose file' function to select your .bib file and import it. The records will appear in your ORCID record. If you find duplicates, you can either delete one version or select one to the 'Preferred Source' and the other will be hidden behind it.
