

QUT ePrints - Guide to exporting records in EndNote format

Step 1

Go to Advanced Search and enter search criteria (eg author name, keywords, subject headings, date ranges).

When the results of the search are displayed on the screen, you will see an option to 'Export' the results. Change the export format from ASCII Citation to EndNote (see below) before saving the file.

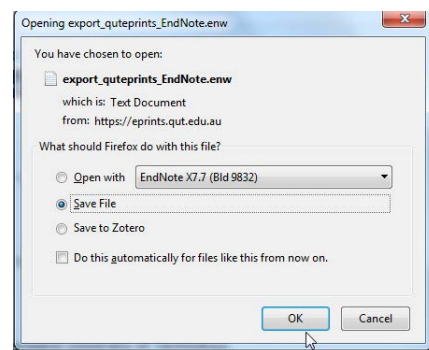

Keywords matches any of "Dance Dancing choreography"

Displaying results 1 to 20 of 32.
[Refine search](#) | [New search](#) | [Save search](#) | 1 | 2 | [Next](#)
 Order the results: by year (most recent first) [Reorder](#)

Export 32 results as: **EndNote** [Export](#) [RSS 2.0](#)

1. Starrs, D. Brun... [dancer](#). In: *Social Voice in "Dance Me to My Song"*. M/JC: A Journal of Media and Culture, 11(3).

2. Starrs, D. Brun... [dancer](#). In: *Social Voice in "Dance Me to My Song"*. M/JC: A Journal of Media and Culture, 11(3).

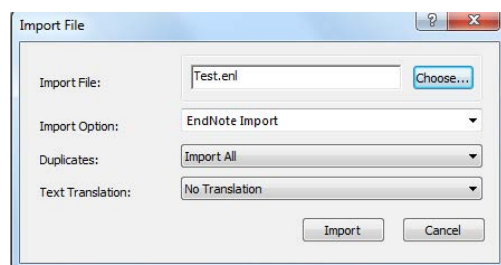

You can change the file name but do not change the .enw file extension as this is a particular type of text file which can be interpreted by EndNote.

Step 2

Go to EndNote and create a new library (or open relevant library if you intend to add the records to an existing library).

From the 'File' menu on the toolbar, select 'Import' (file). Use the 'Choose' function to find your file. When you click 'Import', the records will appear in the EndNote library.

If applicable, repeat search of QUT ePrints using different search criteria and import additional batches or records to the same library. After the last 'Import', delete duplicates ('References' > 'Show all references' > 'Find Duplicates' > Delete).
